

Fugue

Get a complete picture of your security posture for just \$1

Simplify cloud security with end-to-end policy as code in a single tool

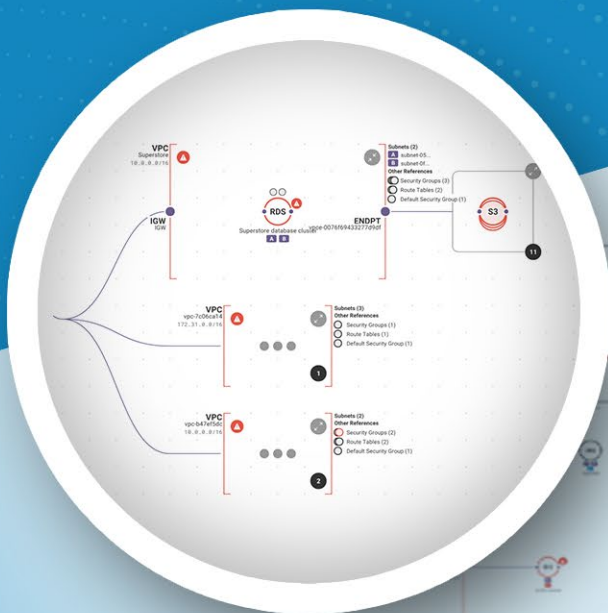

Fugue, a cloud security and compliance tool, is available for just \$1 for one month. Fugue empowers cloud engineering and security teams to prove continuous compliance, build security into your AWS (and multi-cloud) cloud deployments, and eliminate misconfigurations.

Get added visibility and value on day 1.

You can't secure what you can't see. Fugue provides an interactive map of your cloud runtime and infrastructure as code resources so you immediately see vulnerabilities, your compliance posture, and how resources are connected.

Use Fugue and in 30 days you'll...

- Gain a detailed and interactive view of your security posture in 15 minutes of connecting your environment.
- Apply policy as code using standard compliance families such as SOC2, HIPPA, AWS Well-Architected Framework, etc. to support your compliance reporting needs.
- Shift left by applying the same policies to your infrastructure as code in development and in CI/CD.

It's super easy to get started

-  Connect your environment through read-only role access (no agents required)
-  Generate a visualization of your environment and security posture within 15 minutes
-  Schedule a consultation with a solution architect to optimize your trial experience and accelerate your security and compliance journey

\$1 promo is offered as a Private Offer through the

 aws marketplace

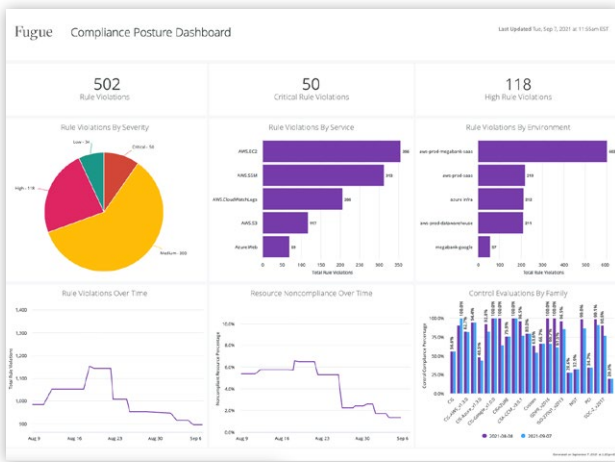

Reduce your risk, cost, and engineering time by modernizing your AWS cloud security

Fugue automates cloud security and compliance from code to runtime

Fugue is the only platform with a unified policy engine so you can operationalize security both pre- and post-deployment. With Fugue, you can run security checks on your AWS CloudFormation and Terraform during development and in CI/CD. Receive fast feedback and remediation guidance so you deliver secure cloud infrastructure faster. Once deployed, leverage one-click compliance reporting and interactive posture maps to identify and remediate any vulnerabilities.

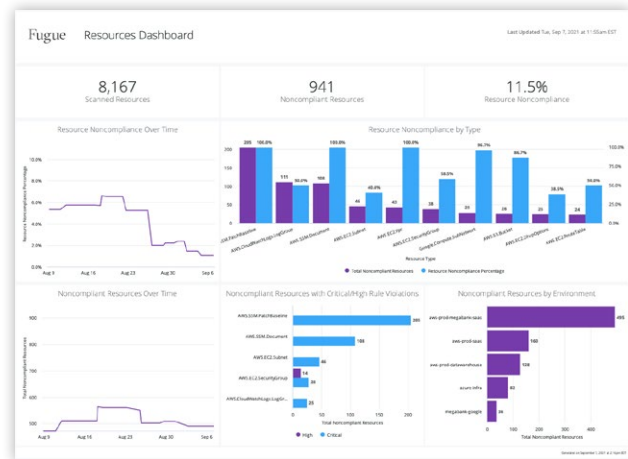

Automate compliance reporting and dashboards

Spend less time on manual audits and continuously prove cloud compliance to auditors and stakeholders with informative dashboards, one-click reports and automated notifications.

Centralize reporting for cloud and IaC security

Track cloud compliance progress and automate reporting for management and auditors.

Use pre-built rules mapped to industry compliance families

Leverage turnkey coverage for SOC 2, HIPAA, ISO 27001, CIS Foundations Benchmarks for Amazon Web Services, AWS Well-Architected Framework, and more. Or, develop custom rules to address internal security policies that address multiple resource vulnerabilities.

Manage multi-cloud environments in one tool

Use the same tool with a single policy engine across all platforms and cloud environments — or to simply facilitate migration to AWS.
